

# Velocity AI

## Price Justification & ROI Ammunition

---

When a prospect questions the price, you don't defend — you reframe. Every number in this document is designed to make \$699–\$2,499/mo feel like a rounding error compared to what they're losing.

**The Core Reframe: Never justify the price against “software.” Justify it against what they're currently paying — in money, time, and lost revenue — to NOT have this system.**

# What They’re Losing Right Now

---

The hidden costs of running without a proper system:

| What They’re Losing | How                        | Weekly      | Annual       |
|---------------------|----------------------------|-------------|--------------|
| Missed calls        | On the tools, can’t answer | \$2,400     | \$124,800    |
| Slow quoting        | Takes 2–3 days to send     | \$4,000     | \$208,000    |
| No follow-up        | Quoted but never chased    | \$4,500     | \$234,000    |
| Admin time          | Invoices at 9pm            | \$960       | \$49,920     |
| No repeat marketing | Past customers forget      | \$500       | \$26,000     |
| TOTAL               |                            | \$12,360/wk | \$642,720/yr |

*“You’re not spending \$699 a month. You’re recovering \$12,000 a week.”*

These are conservative averages for a 4–8 person trade business. Use THEIR numbers from the discovery call, not yours.

# ROI by Tier

---

## Starter — \$699/mo

| Value Source                                      | Monthly Value       |
|---------------------------------------------------|---------------------|
| Extra jobs from answered calls (1/wk × \$800)     | \$3,200             |
| Admin time saved (5 hrs/wk × \$80/hr)             | \$1,600             |
| Quotes followed up automatically (2/mo × \$1,500) | \$3,000             |
| <b>Total value generated</b>                      | <b>\$7,800/mo</b>   |
| Cost of Starter                                   | \$699/mo            |
| <b>ROI</b>                                        | <b>11.2x return</b> |

*“For every dollar you spend, you’re getting eleven back. And that’s the conservative estimate.”*

## Professional — \$1,499/mo

| Value Source                                     | Monthly Value       |
|--------------------------------------------------|---------------------|
| Extra jobs from AI + automation (2/wk × \$1,200) | \$9,600             |
| Admin time eliminated (10 hrs/wk × \$80/hr)      | \$3,200             |
| Repeat customer re-engagement (3/mo × \$600)     | \$1,800             |
| Quote conversion improvement (5 extra/mo × \$2K) | \$10,000            |
| <b>Total value generated</b>                     | <b>\$24,600/mo</b>  |
| Cost of Professional                             | \$1,499/mo          |
| <b>ROI</b>                                       | <b>16.4x return</b> |

# What They'd Pay Elsewhere

## Replacing Velocity AI with Individual Services

| Service                           | Market Rate                | We Replace It               |
|-----------------------------------|----------------------------|-----------------------------|
| Receptionist (part-time)          | \$2,500–\$4,000/mo         | AI Voice Agent — 24/7       |
| Marketing agency                  | \$2,000–\$5,000/mo         | Marketing automation        |
| CRM software                      | \$200–\$500/mo             | Full custom CRM             |
| Quoting software                  | \$100–\$300/mo             | Automated quoting           |
| Scheduling tool                   | \$50–\$200/mo              | Smart scheduling            |
| Business consultant               | \$500–\$2,000/mo           | Strategy calls + dashboards |
| Web developer retainer            | \$500–\$2,000/mo           | Ongoing system updates      |
| <b>TOTAL if bought separately</b> | <b>\$5,850–\$14,000/mo</b> |                             |
| <b>Velocity AI Professional</b>   | <b>\$1,499/mo</b>          | <b>All of the above</b>     |

*“You’d pay \$6K–\$14K a month to cobble this together from different providers. And none of them would talk to each other. We do it all for \$1,499, and it all works together.”*

## Versus Hiring Staff

| Hire                            | Annual Salary                 | What They Do                  |
|---------------------------------|-------------------------------|-------------------------------|
| Admin / receptionist            | \$50,000–\$65,000             | Answer phones 9–5, data entry |
| Marketing coordinator           | \$55,000–\$75,000             | Social, email, reviews        |
| Operations manager              | \$80,000–\$110,000            | Scheduling, quoting, team     |
| <b>Total hires</b>              | <b>\$185,000–\$250,000/yr</b> |                               |
| <b>Velocity AI Professional</b> | <b>\$17,988/yr</b>            | <b>Does all three, 24/7</b>   |

*“For less than 10% of what you’d pay ONE hire, you get the output of three — and it doesn’t call in sick, doesn’t need super, and doesn’t take annual leave.”*

# Setup Fee Justification

---

*“This isn’t a template. We’re building your entire operations system from scratch — your products, your pricing, your workflow, your branding.”*

| Build Task                   | Agency Rate       |
|------------------------------|-------------------|
| CRM setup + data migration   | \$2,000–\$5,000   |
| Quoting system configuration | \$1,500–\$3,000   |
| Marketing automation setup   | \$2,000–\$4,000   |
| AI voice agent deployment    | \$3,000–\$5,000   |
| Scheduling system config     | \$1,000–\$2,000   |
| Dashboard + reporting        | \$1,500–\$3,000   |
| Onboarding + training        | \$1,000–\$2,000   |
| Dev agency total             | \$12,000–\$24,000 |
| Our setup fee                | \$2,500–\$10,000  |

**Split payment removes friction: 50% upfront, 50% on delivery. “You don’t pay the rest until you’re happy.”**

# Trade-Specific ROI Examples

---

Use the one that matches their trade — specific numbers are more persuasive than generic ones.

## Plumber

*A plumber averaging \$800 per emergency callout who misses just 3 calls a week is leaving \$124,800 on the table every year. Our AI picks up every single call. Even if it only converts 1 extra job a week, that's \$41,600 in revenue you weren't getting — for \$699 a month.*

## Electrician

*If your quote-to-close rate goes from 30% to 45% — which is what automation does by following up when you forget — and you're quoting 20 jobs a month at \$3,000 average, that's an extra \$9,000 a month in closed work. For \$1,499.*

## Builder

*One missed progress claim that sits for an extra 2 weeks costs you in cash flow and interest. One variation that doesn't get documented properly can cost you \$10K at the end of the job. The system pays for itself on the first project.*

## HVAC

*If you had a system that automatically contacted last year's customers before summer with a service offer, and 10% of them rebooked at \$350, that's \$3,500 from a list of 100 past customers. And you did nothing.*

## Roofer

*After a storm, you'll get 50 calls in a day. How many can you answer? Our AI handles all of them, qualifies the job, books the inspection. Your competitors are still listening to voicemails the next morning.*

# Objection Responses

---

## **“It’s too expensive”**

*Calculate it live: “You said you’re spending [X] hours a week on admin at \$[Y]/hr. That’s \$[Z] a month in time alone — before we count missed calls and lost quotes. Our system costs [Stier]. You’re already spending more than that doing nothing about the problem.”*

## **“\$699 is a lot for a small business”**

*“That’s \$23 a day. Less than a tradie’s smoko run. And it’s answering your phone 24/7, following up your quotes, and booking your jobs while you sleep. What’s one missed job worth?”*

## **“I can get a CRM for \$49/mo”**

*“You can. And you’ll spend 6 months setting it up, it won’t answer your phone, it won’t follow up your quotes, and it won’t send review requests. You’ll be back to doing admin at 9pm because the tool only does 20% of what you need. We do 100% — and we set it up for you.”*

## **“Let me think about it”**

*“No worries. But if this saves you 10 hours a week and brings in an extra \$3K–\$5K a month in jobs you’re currently missing, what’s the cost of waiting another month to start?”*

## **“Can you do a discount?”**

*“What I can do is start you on Starter at \$699 and upgrade to Professional once you’ve seen the results. That way you’re not committing to the full package until you know it works.”*

---

**Key Rule: Never defend the price. Reframe around what they’re already losing. The price isn’t \$699/mo. The price of NOT doing this is \$5K–\$10K/mo in lost revenue, wasted time, and missed growth.**
